

My project will be the Animal Crossing New Horizons App. It will be designed for Animal Crossing fans to look up information on their favorite characters and other aspects of the game. It will provide a fun guide to the world of Animal Crossing. I will be using the Animal Crossing New Horizons API and npm as the package manager for the JavaScript runtime environment Node.js. Tasks that need to be completed and the plan for the next 3 weeks:

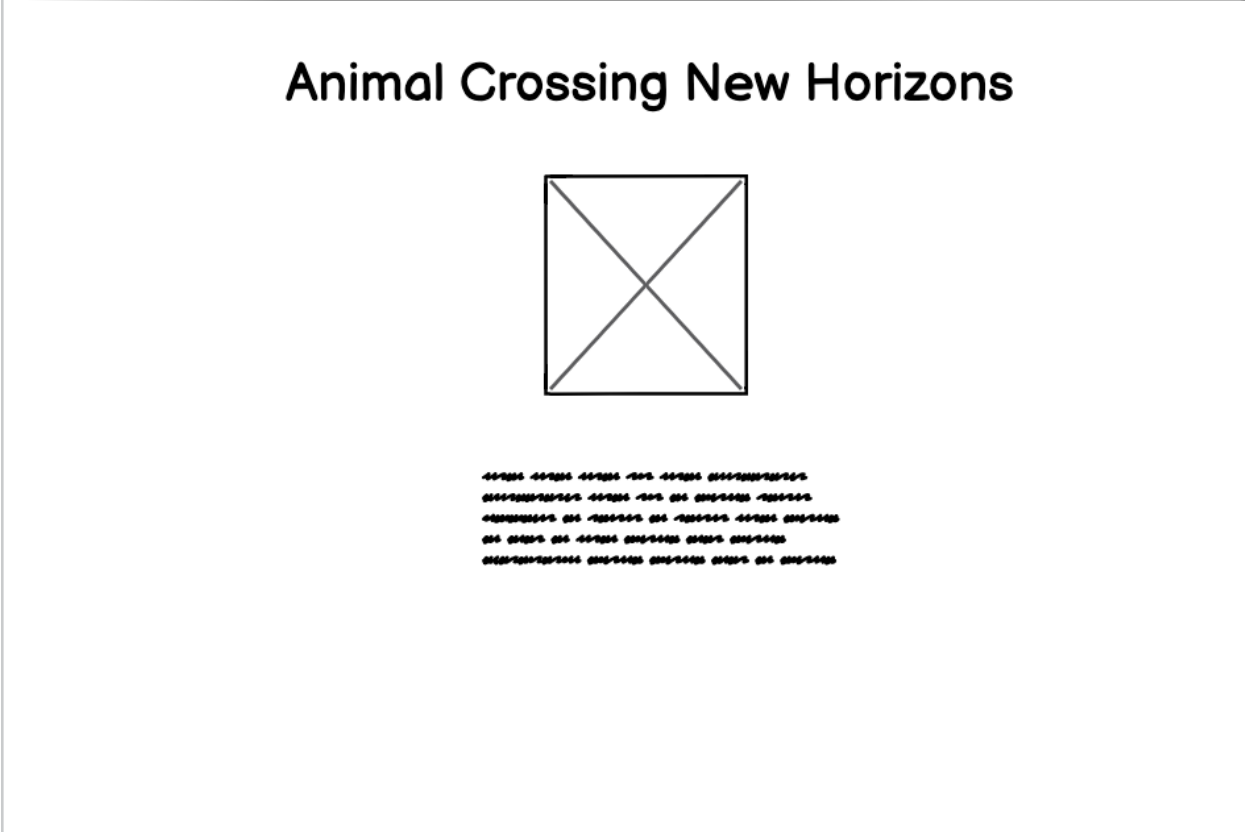

- Set up a Github repository for the project and clone it to my machine – week 1
- Setup create-react-app scaffold -week 1
- Call the Animal Crossing New Horizons API and print results -week 1
- Set up API to return data in the React application -week 1
- Create a homepage with navbar and links – week 2
- Create summary pages for characters, fish and fossils -week 2
- Create details pages for characters, fish and fossils -week 2
- Style the pages -week 3
- Perform final testing – week
